

Pressure Washing vs. Soft Washing:

PROS AND CONS

ARE YOU LOOKING FOR A NEW WAY TO WASH YOUR HOME?

Even though pressure washing and soft washing are often used interchangeably, there are some significant differences between the two methods.

Soft washing uses a low-pressure setting to remove dirt and grime from surfaces, while **pressure washing** blasts away dirt with high water pressure.

In this blog post, we will discuss the benefits of pressure washing and soft washing, as well as provide suggestions for determining which method is best for you.

PRESSURE WASHING

Let's talk about pressure washing first.

WHAT IS PRESSURE WASHING?

When pressure washing, dirt is removed from surfaces with a high-pressure spray. Since the pressure is typically higher than what can be achieved with soft washing, it is the perfect choice for **heavy stains on concrete surfaces only**.

One drawback of pressure washers is that they may cause damage to surfaces that are too delicate. Additionally, the high pressure of the water spray can damage brick or stone surfaces you didn't intend for it to hit.

SOFT WASHING

Let's talk about soft washing next.

WHAT IS SOFT WASHING?

A soft wash system uses a low-pressure water stream to remove loose dirt without causing any of the damage caused by pressure washing.

In most cases, soft washing uses the same nozzle that pressure washers use to blast water at high pressures. Unlike pressure washers, soft washing does NOT damage delicate surfaces such as brick or stone.

Soft washing can also be used to remove dirt and grime from painted surfaces and stained surfaces without harming the surface.

SO HOW DO I DECIDE WHAT METHOD IS BEST FOR MY HOME?

If your goal is to effectively clean your **shingle or metal roofs** and to remove **mold, mildew and algae** from **exterior surfaces** go with soft washing.

If you have **hard-to-remove stains** on your **driveway or concrete areas**, pressure washing would be a better solution.

Although soft washing cannot remove tough stains as effectively as pressure washers, you should choose **soft washing** over high-pressure water spray if you prefer a **less abrasive method of cleaning your surfaces**.

Both methods have pros and cons, but hiring a professional can help you decide which method is right for you.

ARE YOU LOOKING FOR A NEW WAY TO CLEAN YOUR HOME?

Soft washing is a gentler alternative to pressure washing. The soft-washing process uses low-pressure water streams to remove dirt and grime without damaging delicate surfaces such as brick, asphalt shingles or stone. In addition, it can gently remove dirt and grime from painted and stained surfaces without damaging them.
